Department of Software Engineering Technology

Quiz: 01

Name: Usman Arif

Roll No: 2024 – SET – 17

Semester: 4th SET

Session: 2024 – 28

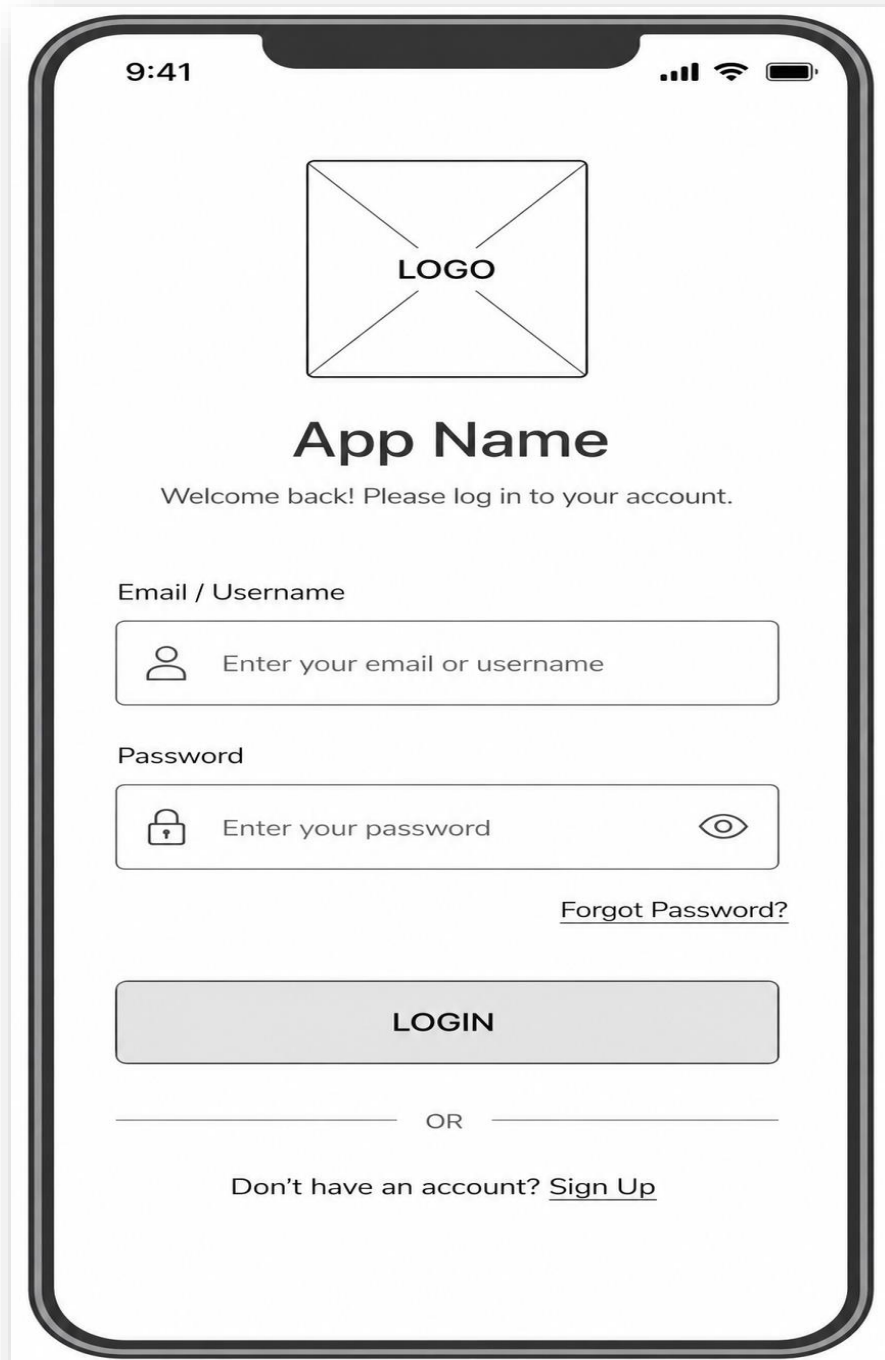

Subject: Graphic Designing
Submitted To: Engr. Fatima Khawaja

➤ Quiz 1: Introduction to UI/UX

Question:

Design a low-fidelity wireframe for a mobile app login screen and explain how your design improves user experience.

Part 1: Low-Fidelity Wireframe

- **App Logo/Title:** Included at the top center for immediate brand recognition.
- **Input Fields:** Dedicated "Email / Username" and "Password" fields with clear labels and icons.
- **Action Button:** A prominent "LOGIN" button with a shaded background to signify the primary action.
- **Secondary Options:** "Forgot Password?" and "Sign Up" links are positioned in standard, easy-to-find locations.

Part 2: UX Explanation

My design improves the user experience through the following methods:

1. **Visual Hierarchy:** By using a shaded box for the "LOGIN" button and bold text for the "App Name," the user's eye is naturally guided to the most important elements first.
2. **Error Prevention:** The inclusion of an "eye" icon in the password field allows users to verify their input, reducing login errors and frustration.
3. **Reduced Cognitive Load:** The layout follows standard mobile design patterns (labels above boxes, "Sign Up" at the bottom), making the interface intuitive and "user-centered" without requiring the user to think.
